Palo Alto

Did you know that according to Gartner, 99% of firewall breaches through 2023 will be due to firewall misconfigurations, not firewall flaws? With today's modern firewalls, security professionals need to consider a myriad of options on an ongoing basis to ensure their environment is protected.

Solution Overview

ANM Insights provides an assessment of your Palo Alto firewalls and Panorama management to ensure they align with current best practices. This includes identifying potential misconfigurations and features that have not yet been enabled on your platform.

This assessment is highly automated so that it can be deployed rapidly, without weeks of setup process.

This assessment will allow you to:

› Save time in reviewing entire firewall configuration manually

› Lower risk of configuration errors

› Maximize the return on your security investment

Following the assessment, ANM's team of security experts will review the findings, identify a recommended order of prioritization, and determine how these changes will fit in with your broader security strategy.

The findings will be delivered via a written assessment highlighting gaps and a configuration guide for suggested changes.

› Identify gaps in best practices on NGFW and Panorama

› Suggest configuration steps to address identified gaps

› Reduce opportunities for attack by creating usage baselines and systematically reducing unnecessary applications and user traffic

› Pinpoint device performance and health issues that are degrading the user experience

› Review Technical, Operational and Management controls on the Palo Alto firewall and Panorama

› Determine the maintenance coverage of your critical devices to make sure they are appropriately covered

WHAT SETS US APART

› ANM is one of the top security providers in the country with a long history of expertise in a variety of security technologies. Our team takes an engineering led approach to problem solving, highlighted by our 6:1 engineering to sales ratio.

› Unlike many other solution providers, our goal is to proactively identify areas of opportunity in your environment via assessment, as opposed to starting with a product searching for a problem.

FOLLOW-ON SERVICES

› ANM has several in-depth follow-on advisory services that address a broad range of challenges across the entire network, data center, cloud, and security technology ecosystems. Whether you are planning a SASE implementation, network refresh, security segmentation strategy, or data center consolidation or move, ANM can help guide you through the complexities of planning and rollout.

We'd love to hear from you.
